## 1. General information

All persons involved with the assembly, operation and/or maintenance of gas pressure regulators must read and understand all of the following documents:

- **Technical product information (brochure \*.00)** – it contains the technical data and dimensions of the equipment as well as instructions concerning construction and mode of operation.
- **General operating manual for gas pressure regulators and safety devices** – this RMG document contains information on assembly and operation as well as general information on troubleshooting.
- **Operating and maintenance instructions / spare parts (brochure 650.20)** – this document contains more detailed information on assembly and operation of the gas pressure regulator. It also contains the maintenance instructions, spare parts drawings and lists of the actuator unit.
- **Pilot RMG 650 is an integral component of the control unit** and is described in this document, "Operating and maintenance instructions, spare parts".
- other components:

Filter	RMG 905	905.20
Overpressure protection	RMG 925	925.20

There are **national laws** and regulations for all sorts of jobs on gas pressure regulators, from planning to maintenance. Be sure to comply. (In Germany, for instance, DVGW working instructions G 600, G 459/II, G 491 and G 495.)

Inspection and maintenance intervals depend mostly on operating conditions and the nature and properties of the gas. There are no fixed rules or recommendations for intervals. For Germany, we recommend you start by complying with maintenance intervals as stated in DVGW, working instruction G 495. However, in the mid-term, intervals must be adapted to the requirements of each specific station.

During maintenance, components must be cleaned and then checked thoroughly. This is necessary even if there have been any unusual observations during operation and/or functional testing. Checks must focus, in particular, on diaphragms and sealing rings and all movable parts and their respective bearings. Any and all defective parts must be replaced with new ones. The same applies to O rings removed during dismantling.

Item numbers mentioned in the specific operating and maintenance instructions correspond with the numbers in the spare parts lists and drawings. Some parts in the lists and drawings are marked with a letter "W". We recommend you always have a reserve of those parts in stock for maintenance purposes. Those spare parts are given separately at the end of the spare parts list.

### 1.1 Safety information

In this manual, safety information is highlighted by means of the following titles and eye catchers:

#### Eye catcher used for:

**Danger**

**Danger to life and limb**

**Caution**

**Danger of damage to property  
and/or the environment**

**Note**

**Important additional information**

## 2. Specific operating instructions

### 2.1 Adjusting auxiliary pressure

The selected auxiliary pressure settings have a significant influence on the control behaviour of the equipment. In order to achieve the best possible control precision at a low closing pressure, the auxiliary pressure should be set as high as the stability of the gas pressure regulator will allow.

### 2.2 Discharge valve

There is no need, in most cases, to change the settings made by RMG.

**Note**

Difference between auxiliary and outlet pressure: about 5 to 10 bar higher

## 3. Specific maintenance instructions

- **Bead diaphragm (119, 169, 219, 260)**

During assembly, observe the correct mounting position of the loop (see spare parts drawings of the various stages)

- **Diaphragm disc (107, 154, 207, 276)**

When tightening the sealing cap (103, 167, 203, 258), hex nut (123, 223, 280), use an SW 24 wrench to secure the diaphragm disc so it doesn't move.

- **Adjusting diaphragm system**

During assembly, the diaphragm system must be secured in a suitable manner:

Find the centre position by first turning all the way to the right and to the left. This is where the transverse bores of the junction piece (122, 158, 222, 263) and the valve housing (121, 171, 221, 261) align.

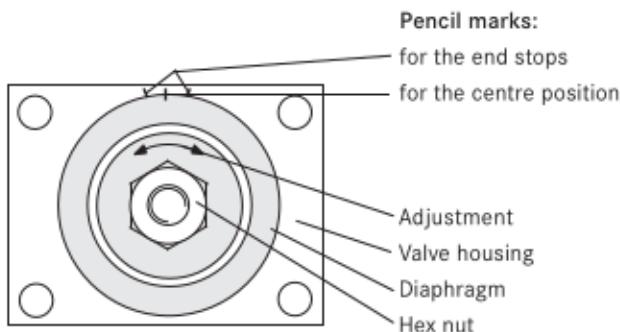

Fig. 2: Diaphragm system

- **Junction piece (158)**

Completely assemble the junction piece. Grease with LOCTITE to the threaded stem and introduce it into the connection cone of the metal harmonica (173) until the transverse bore of the junction piece is 0.5 to 1.0 mm deeper than the transverse bore of the valve housing (171).

The two transverse bores must align precisely.

- Valve core (105, 156, 205, 278)

Use the adjusting screw (234, 185, 284) to adjust the diaphragm system so that the valve core can be mounted.

- Base plate (1)

In all the stages, the contact faces must be aligned perfectly parallel to the base plates.

- Spindle (29) of the booster valve

For the basic setting of the booster valve: adjust the spindle (29) until the groove marked in black aligns with the front edge of the guide screw (30) of the fixed sleeve (31).

### 3.1 Tightening torques MA

Item number	Torque figures MA in Nm
176	6
2, 115, 132, 138, 165, 183, 195, 215, 232, 238, 251, 267, 272	12
103, 123, 167, 223, 258, 280	20
270	10

### 3.2 Lubricants

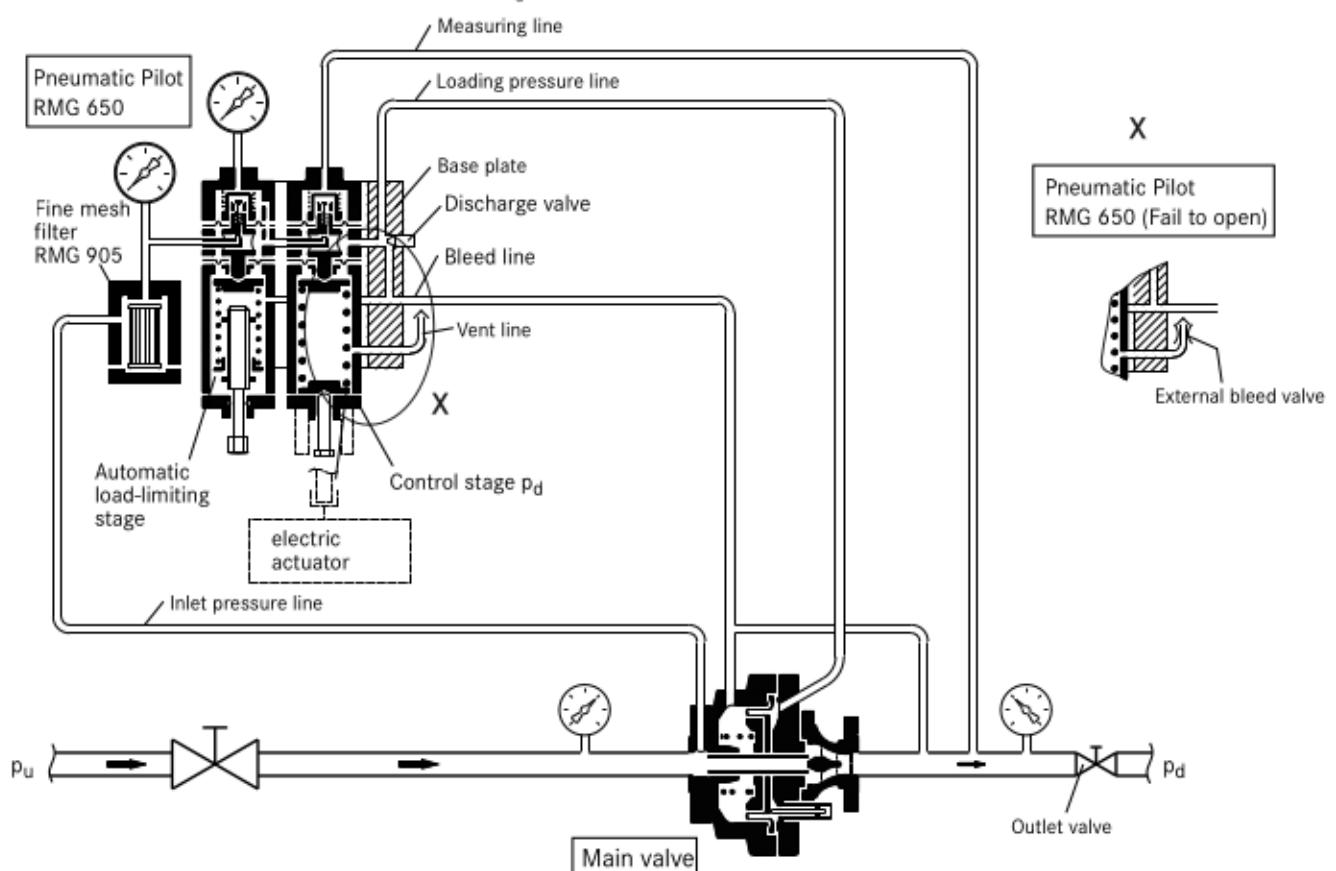

Components (grease lightly)	Lubricants	RMG part no.
All O rings, slip guides, slip faces and switching elements	Silicone grease	27081 (tube 0.1 kg)
Hollow of the spring plate (108, 208, 161) Thread of the cap (130, 230) Thread of the plate (181) All fastening screws and screwed pipe connections	Assembly paste	27091

### 3.3 Threadlocking adhesives

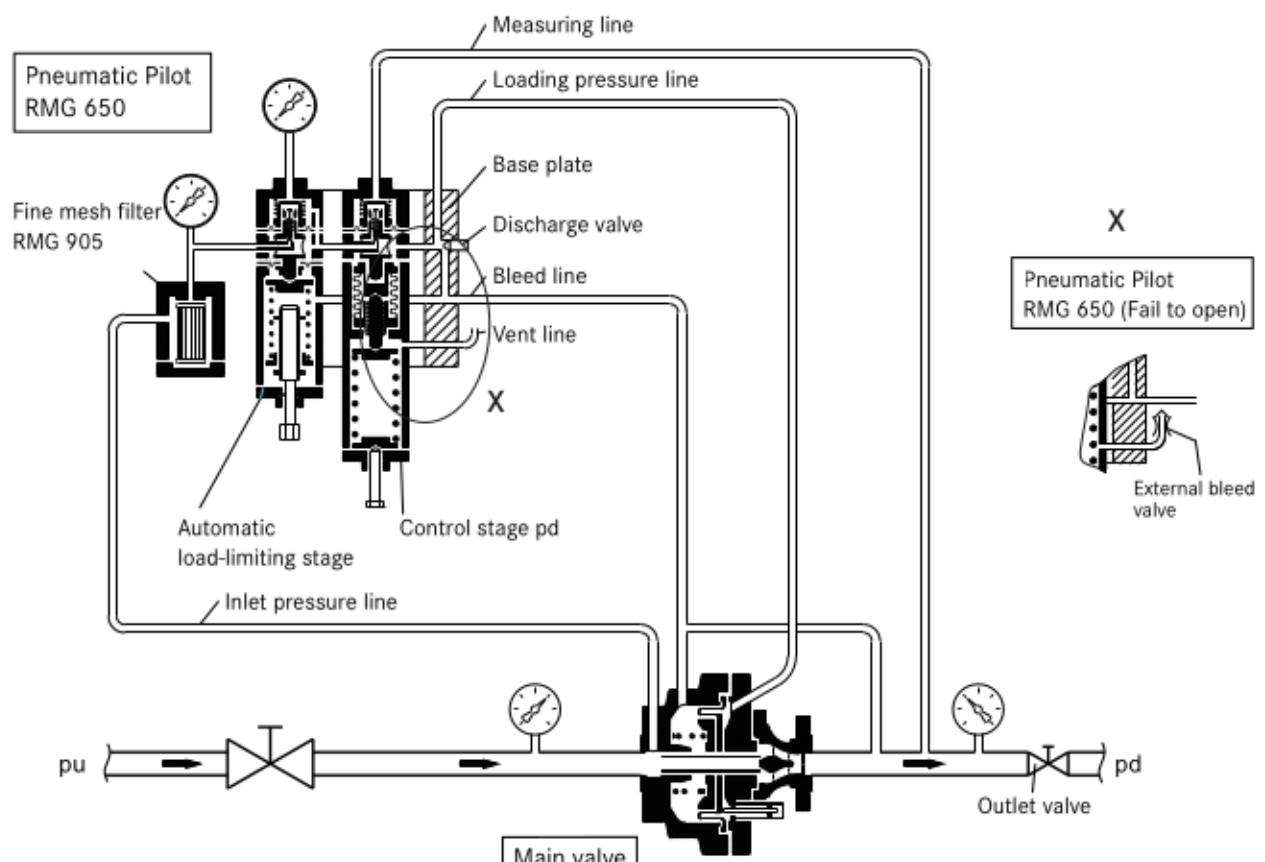

Components (grease lightly)	Safeguards	RMG part no.
Thread of the sealing cap (103, 167, 203, 258) Thread of the hex nut (123, 223, 208) Thread of the junction piece (158, 263)	LOCTITE	26688 (tube 0.1 kg)

#### 4.1 Flow diagram

Pilot with diaphragm measuring unit =  $W_d$  0.5 bar to 40 bar. **FO execution, see "X".**

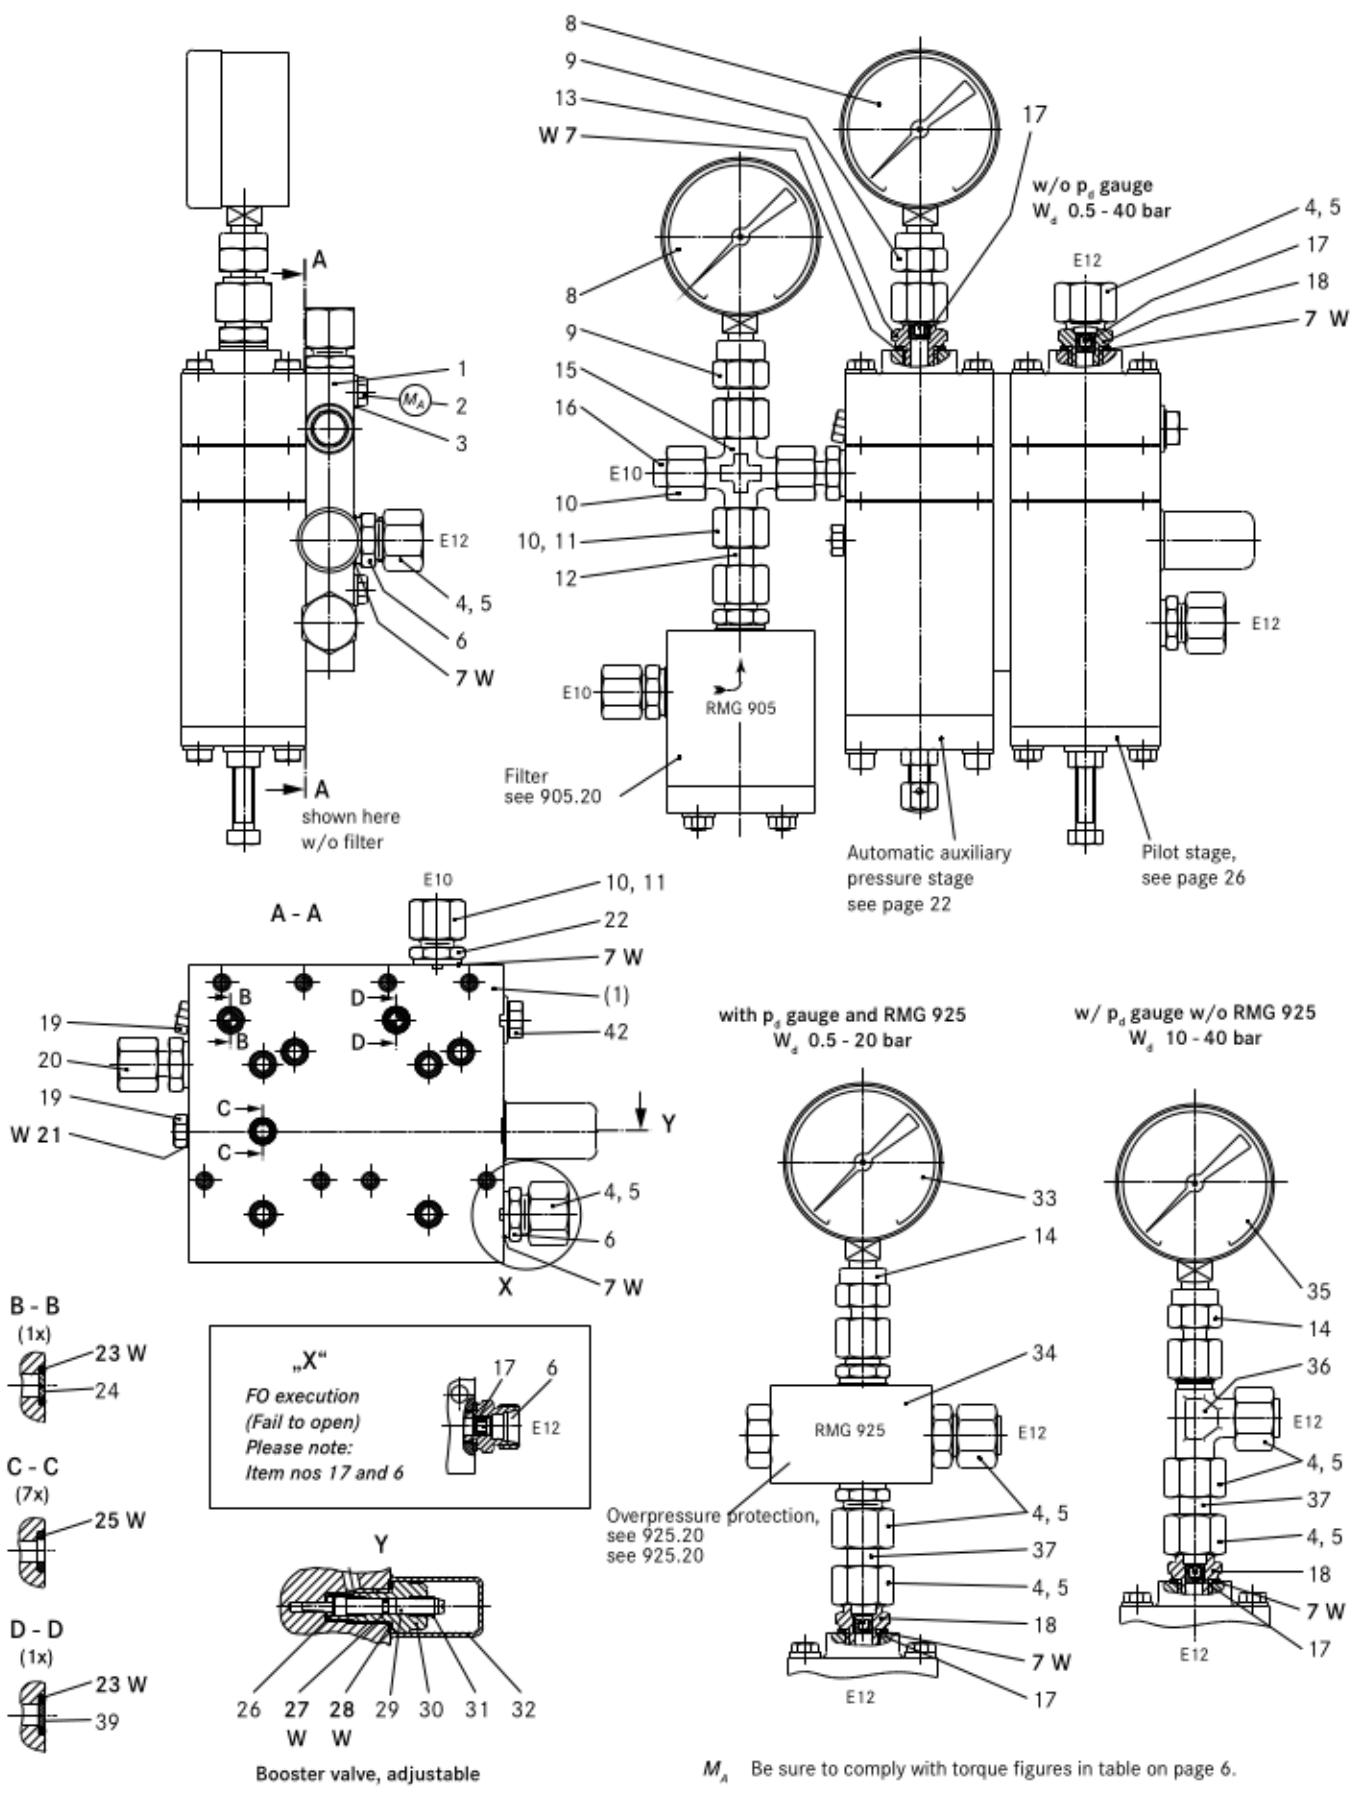

Pilot with metal-harmonica measuring unit =  $W_d$  20 bar to 90 bar. **FO execution, see "X".**

4.1.1.1 Pilot with diaphragm measuring unit. *FO execution, see "X".*

Outlet pressure range = Wd 0.5 to 40 bar

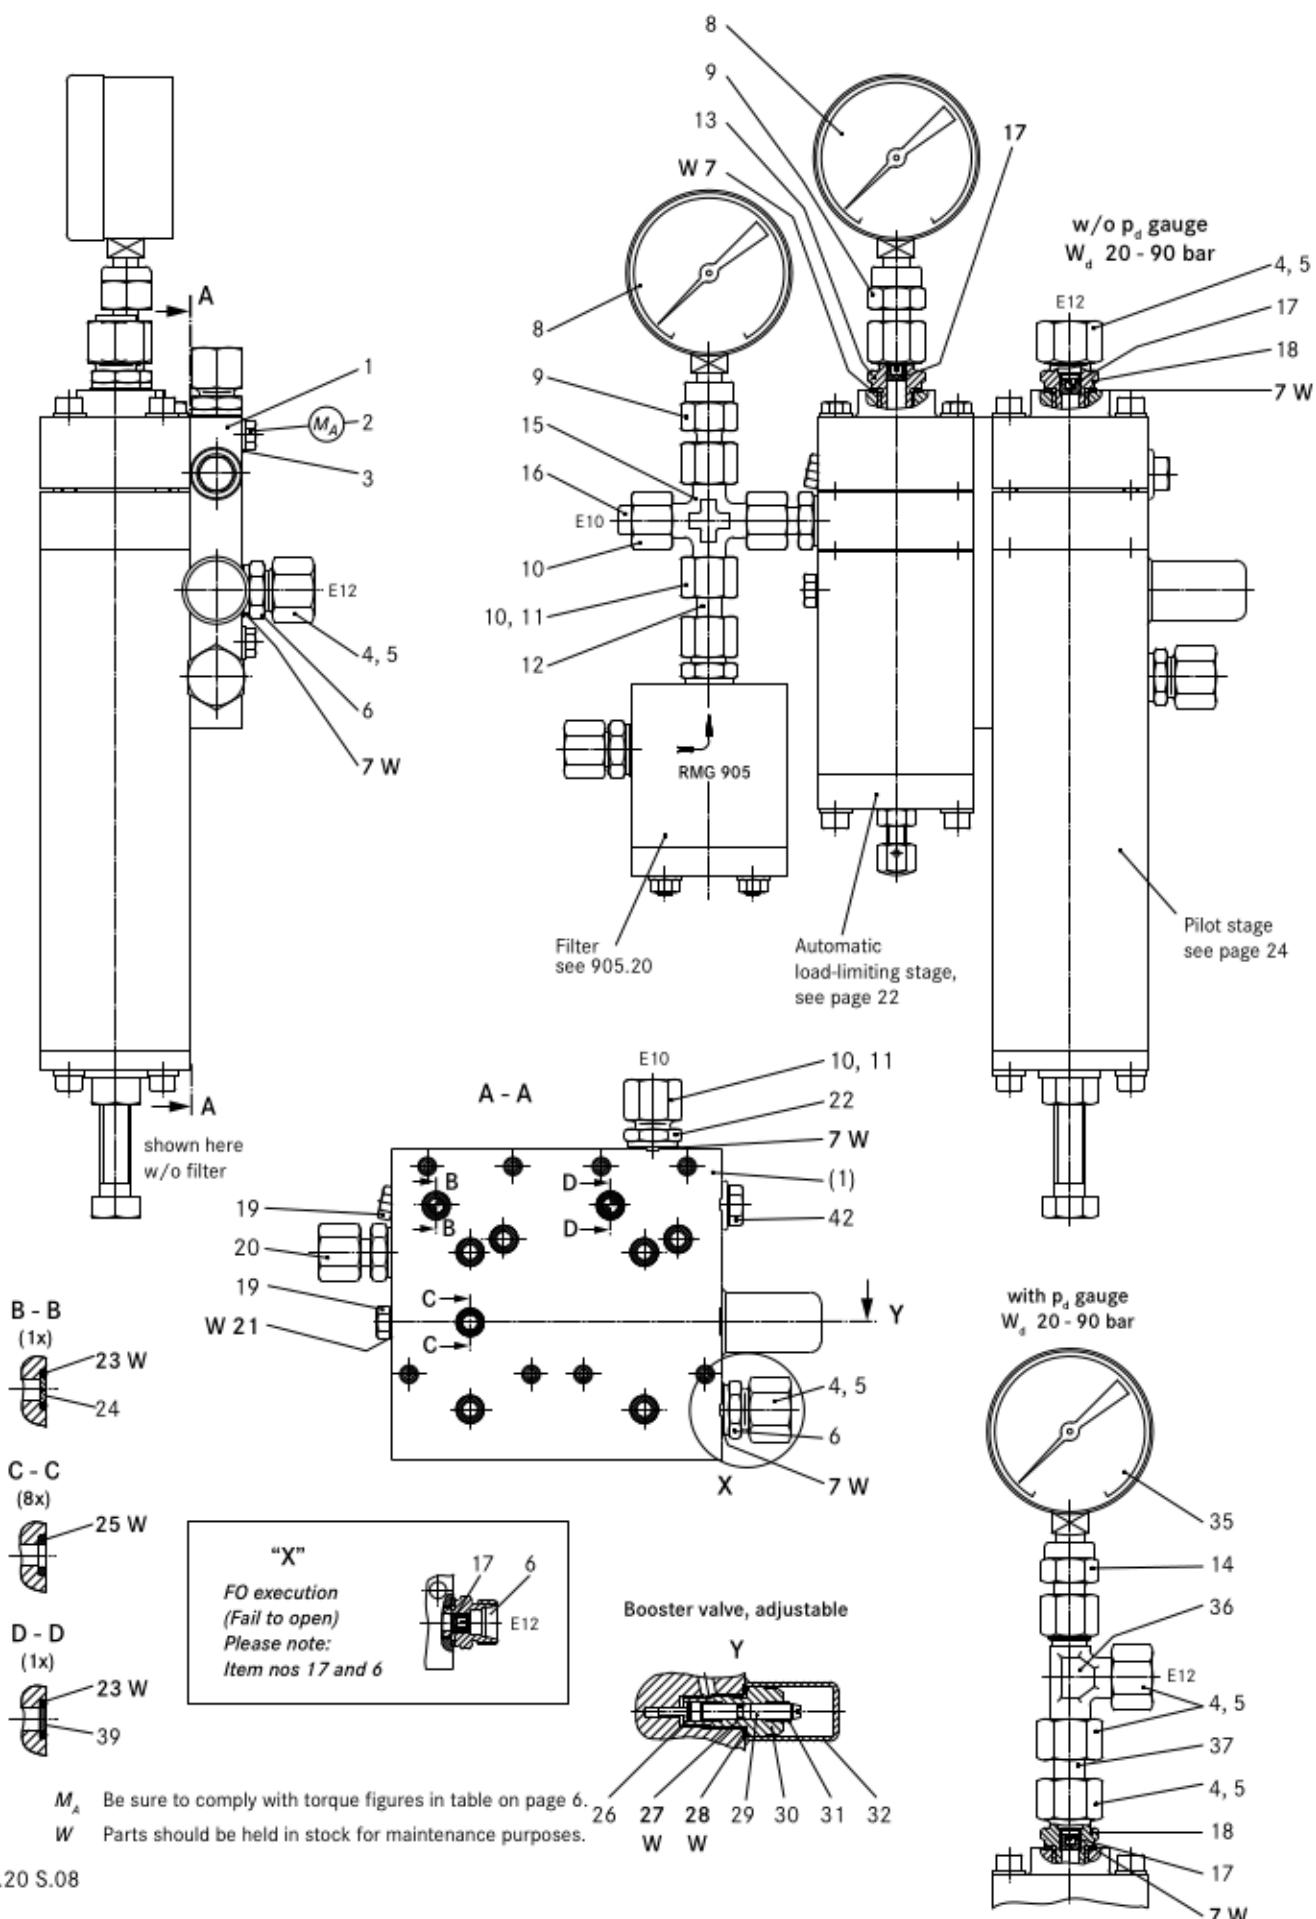

*M<sub>A</sub>* Be sure to comply with torque figures in table on page 6.

**W** Parts should be held in stock for maintenance purposes.

#### 4.1.1.2 Pilot with metal-harmonica measuring unit. FO execution, see "X".

Outlet pressure range =  $W_d$  20 to 90 bar

**4.1.2 Pilot with diaphragm measuring unit      W<sub>d</sub> 0,5 bar to 40 bar**  
**with metal-harmonica measuring unit      W<sub>d</sub> 20 bar to 90 bar**
