

Gas Pressure Regulator RMG 361

PRODUCT INFORMATION

**Serving the Gas Industry
Worldwide**

Gas Pressure Regulator RMG 361

Application, characteristics, technical data

Application

- Gas pressure regulators (GDR) for commercial and industrial gas installations as well as local supply installations
- can be used for natural gas and all non-corrosive gases

Characteristics

- 2**
- GDR with integrated SAV safety shut-off valve and optional SBV safety relief valve for gas leakages
 - max. valve diameter = nominal size = DN
 - SAV safety shut-off valve with axial flow; pressure compensation valve (internal bypass) integrated in shut-off valve

TECHNICAL DATA						
max. allowable pressure PS	10 bar					
setting range	spring no./colour	W _a in bar				
	* RE 0	* RE 1 / RE2	* RE 3			
	0 / blue	0,020 ... 0,030

materials	main valve body and SAV			ductile iron		
	actuator diaphragm			steel, aluminium alloy		
	diaphragms, sealings			rubber		
	internal parts			aluminium alloy, steel, brass		
temperature range, class 2	-20°C to +60°C					
function and strength	acc. to DIN EN 334 and DIN EN 14382					
DIN-DVGW registration no.	NG-430 1 AS 0094					

Gas Pressure Regulator RMG 361

Application, characteristics, technical data

DEVICE SIZES

DN	valve seat diameter [mm]	KG value in m ³ /h (for natural gas, ρ _n =0,83 kg/m ³)		max inlet pressure p _{umax} (bar)*			
		without noise reduction	with noise reduction	regulating assembly RE	RE 0	RE 1	RE 2
DN 25	25	370	approximately 10 % loss of capacity	10	10		
	31	460		10	10		
DN 50	31	800	approximately 10 % loss of capacity	10	10	10	
	50	1400		10	6 (10)	10	
DN 80	60	2200	approximately 10 % loss of capacity	10		10	5
	80	2700		10		6 (10)	5
DN 100	60	2900	approximately 10 % loss of capacity	10		10	5
	80	3700		10		6 (10)	5
	100	4200		10		4 (8)	5

*). The limitation of the inlet pressure range Δp_{umax} for a diaphragm assembly RE 1 and RE 2 is not given for reasons of material strength but in the interest of maintaining the regulating accuracy. The inlet pressure deviations though may not exceed the limit of the valve's nominal pressure rating. The accuracy classes AC and lock-up pressure classes SG are fixed by the DVGW type tests. The maximum value that is within the allowed exceeding limits is the value indicated in brackets.

ADJUSTING RANGES OF SAV SAFETY SHUT-OFF VALVE RMG 673, K 1 AND K2 A

control device	setpoint spring		upper response pressure *	lower response pressure *		response pressure group	
	No.	colour		adjustable range	smallest difference between response pressure and normal operating pressure		
		in mm	W _{a0} (bar)	Δ p (bar)	W _{au} (bar)	Δ p (bar)	AG**
K1a	1	yellow	2,50	0,050 ... 0,100	0,030		10 / 5,0
	2	bright red	3,20	0,080 ... 0,250	0,050		10 / 5,0
	3	dark red	3,60	0,200 ... 0,500	0,100		5 / 2,5
	4	white	4,75	0,500 ... 1,500	0,250		5 / 2,5
	5	yellow	1,00		0,010 ... 0,015	0,012	15
	6	white	1,20		0,014 ... 0,040	0,030	15 / 5,0
	7	black	1,40		0,035 ... 0,120	0,060	5
K2a	2	bright red	3,20	0,400 ... 0,800	0,100		10 / 5,0
	3	dark red	3,60	0,600 ... 1,600	0,200		10 / 5,0
	4	white	4,75	1,500 ... 5,000	0,300		5 / 2,5
	5	light blue	1,10		0,060 ... 0,150	0,050	15 / 5,0
	6	black	1,40		0,120 ... 0,400	0,100	5

*) Note: If the control device is set for both the upper and lower response pressure value, the difference between the setpoints of the upper and lower response pressure (p_{s0} and p_{su}) must be at least 10 % greater than the sum of the values specified for Δp_o and Δp_u.

$$p_{s0} - p_{su} \geq 1.1 (\Delta p_o + \Delta p_u)$$

**) The higher AG group is for the first half, the lower AG group is for the second half of the setting range.

SAFETY RELIEF VALVE (SBV FOR GAS LEAKAGES)

SAFETY RELIEF VALVE (SBV FOR GAS LEAKAGES)			
No.	setpoint spring wire diameter in mm	regulating assembly	actuating pressure *** adjusting via p_{as} (mbar)
1	3,5	RE 1	15+5 ... 90+15
1	3,5	RE 2	15+5
2	3,6		30+15
3	4,5		60+15
2	3,6	RE 3	15+10
3	4,5		30+10

*** optional fixed setpoint value

Versions (at option)

- with leakage SBV for regulating assembly 1, 2, 3 (up to 0.5 bar)
- with SAV manual release
- with SAV electro-magnetic remote release
- with electric position indicator SAV "closed" by an inductive proximity switch
- regulating assembly 1 + 2 with safety diaphragm
- with respirator valve Type RMG 915 (SAV/RE)
- with noise reduction
- without SAV

Design and Operation (figure 1)

The RMG 361 gas pressure regulator is designed to keep the outlet pressure constant, irrespective of changes in the inlet pressure and volumetric flowrate of the regulating line. It consists of the regulating device (1), valve (2), SAV safety shut-off valve (3), switching device (4), control device (5) and valve housing (6).

The valve of the regulating device is pressure compensated by means of a compensation diaphragm (7). Different valve sizes can be used for each nominal width. An optional SBV safety relief valve (9) can be fitted in the regulating device.

The outlet pressure is fed via the measuring line to the measuring unit. This compares the actual value with the setpoint specified by the force applied by the setpoint spring (10). Any deviation from the setpoint will cause an adjustment in the valve (2) via the valve stem (11) so that the actual value is adjusted to the setpoint. The valve closes tight if there is zero consumption.

Types with a safety diaphragm (13) have this positioned over the diaphragm (8). If this diaphragm (8) breaks, the safety diaphragm (13) presses against the diaphragm cover and prevents gas leaking into the atmosphere.

A foam metal cylinder (12) can be used in the actuator in order to reduce noise.

The safety shut-off valve arranged on the inlet side shuts off the gas flow if the outlet pressure deviates above or below the specified limit values. In this case the measuring diaphragm (20) of the control device (5) is moved in such way that the balls (21) of the latch mechanism release the actuator stem (22). The spring force causes this to strike the release socket of the switching device (4), as a result of which the shaft (23) of the SAV shut-off valve (3) disengages and causes the SAV shut-off valve to close. The SAV shut-off valve can only be opened manually. For this the outlet pressure at the measuring point must be reduced below the upper response pressure or increased above the lower response pressure by at least the value of the re-engagement differential (Δp).

Mounting, operation and maintenance

For mounting and maintenance the DVGW worksheets G 490, G 491, G 495 and G 600 have to be considered as well as the general operating instructions.

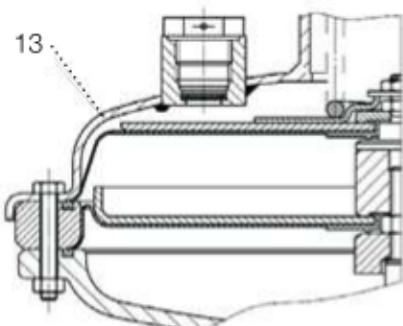

The "General Operating Instructions, Spare Parts 361.20.01" gives full information about mounting, operation, maintenance and important spare parts.

The gas pressure regulator should preferably be mounted in a horizontal position in the pipework.
