

## Electrohydraulic Gas Valves (formerly SH) GH 5000 Series Class 1 Solenoid Gas Valves (formerly SA...KVS) GS2000 Series TABLES LISTING NEW INTERNATIONAL CODE NUMBERS

### Type GH Class 1 Electrohydraulic Valves Type GS Class 1 Solenoid Gas Valves

The development and upgrading of the Johnson Macdaren range of electrohydraulic and solenoid operated industrial gas valves has led to the production of improved models.

In order to distinguish the new improved products from the earlier models and at the same time avoid the problems of lengthened code numbers, it was decided to adopt the international coding system already in worldwide use by Johnson Controls

It should be emphasised that the new production has been carefully engineered to ensure interchangeability with earlier models, so that, for example, new actuators will fit valve bodies from earlier production

In order to assist in the changeover to the new codings, the tables which follow list the most common former SH and SA...KVS codes and relate these to the new international codes.

The new code defines the complete valve and its corresponding replacement actuator using two groups of numerals preceded by the Alpha characters GH (standing for Gas Hydraulic) and GS (standing for Gas Solenoid). For the electrohydraulic actuator, (replacement) the Alpha characters AH (standing for Actuator Hydraulic) are used. The codes are generally of 12 characters in length and it should be particularly noted that the hyphens between the numerical groups also count as characters, for computer

### New GH Electrohydraulic Valves Features:

- CPI switching now available over entire range
- IP54 rating over entire range (protected against dust ingress and water sprayed from all directions). Improved flow.
- Wire mesh integral filters.
- Safety shut-off.
- Class 1, certified to BS5963
- Robust construction.
- Interchangeable actuators
- 240,220 & 110V 50/60Hz models available.

Type GH Valve up to 2" Threaded.  
Aluminium Die Cast Body.

### New GS Solenoid Valves

#### Features:

- Available with Closed Position Indication (C.P.I) switch for all sizes in range. Consult factory.
- IP54 rating over entire range (protected against dust and sprayed water).
- Improved Flow.
- Class 1, certified to BS 5963
- Safety shut-off.
- Robust construction.
- Natural or LP gases.
- Quick opening, step slow opening models with adjustable flow
- Interchangeable actuators.
- 240,220,110, 24 Volt 50/60Hz and 24V,12V DC models available.

Type GS Solenoid Valves  
Fast Opening 1/2"2 BSPP

## GS 2000 Class 1 Gas Safety Shutoff Valves Solenoid Operated

### GS2000 Gas Safety Solenoid Operated Valves

This valve series meets industrial requirements for robust and maintenance free solenoid valves. These single seat two-way valves with solenoid actuator for vertical and horizontal mounting, are suitable for manufactured, natural and L.P. gases. Type GS2000 valves are particularly suitable for control of main gas lines on commercial and industrial power and atmospheric gas burners, meeting the requirements for Class 1 applications and suitable for forced and induced draught gas burners and burner trains.

Of robust construction throughout. The range of operating modes includes Class 1 series fast opening, fast opening with adjustable flow, steps slow opening and step slow opening with adjustable flow.

The silent operation of the slow opening versions is an attractive feature for commercial and residential applications.

### Operation

When the valve is de-energised, the spring loaded valve plug is pressed against the seat to provide tight shut off. When the valve is energised, direct current is supplied through an overload-protected rectifier, incorporated in the valve terminal head, to the Solenoid coil. The magnetic field generated by this coil forces the valve plug from the seat to open the valve downward against the spring and flow medium pressure.

The actuator plunger is guided in a PTFE bearing and provides for maintenance free operation under temperature and pressure conditions within valve specifications. A seal protects the plunger cylinder from the entry of impurities which may be carried by the flow-medium and the valve's seating surfaces and appliance components are additionally protected by a built-in wire-mesh filter.

### Specification

<b>Product:</b>	GS 2000 Class 1 Gas Safety Shut-Off Valves - Solenoid Operated	
<b>Service:</b>	Natural or L.P. gases (i.e. Propane, Butane)	
<b>Mounting:</b>	Vertical and horizontal.	
<b>Materials:</b>	Valve body, up to 2" diecast aluminum.	Flanges: PN/6 to DIN 2501
<b>Character/Sealing:</b>	Magnet Housing: steel on/off with disc type NBR soft seal.	
<b>Temperature:</b>	Ambient - 15 to + 60°C	
<b>Electrical Connection:</b>	Cable compression gland for cables 7-12 mm dia. Pg 13.5 - screw terminals	
<b>Actuator:</b>	Direct current solenoid. Overload protected rectifier.	
<b>Voltages:</b>	220V, 240V, 110V or 24V, 50-60Hz	(+ 10%) (- 15%)
<b>Power Rating:</b>	DN 15 = 21 VA, DN 20 = 25 VA, DN 25 = 32 VA, DN 40 = 46 VA, DN 50 = 55 VA	

<b>Type 1:</b>	Fast opening and closing.
<b>Type 2:</b>	Fast opening and closing with adjustable flow
<b>Type 3:</b>	Step slow opening, fast closing with adjustable low start rate.
<b>Type 4:</b>	Step slow opening, fast closing with adjustable low start rate and adjustable max. flow.
<b>Opening Time:</b>	Fast opening = max 1 sec. Slow opening max. 25 sec.
<b>Closing Time:</b>	Max 1 sec.
<b>Permissible Operating Sequence</b>	Fast opening = 20 per minute Slow opening = 1 per minute
<b>Switch-on Time:</b>	100%
<b>Pressure Tappings:</b>	All valve bodies have Rp 1/8 Tappings. 2 - Inlet side 2 - Outlet side
<b>Enclosure:</b>	IP 54 (DIN 40 050)

## 2. GS 2000 RANGE CLASS 1 SOLENOID OPERATED

### Valve Action

**Fast opening type:** On energising, valve goes immediately to a fully open position, or a position determined by Flow Adjuster, if fitted. **Step slow opening type:** On energising valve goes immediately to an opening determined by Flow Adjuster, if fitted. Maximum time from first step to maximum open position is 25 seconds depending on initial setting.

First step setting is adjustable between 10 and 60% of stroke.

To adjust, remove plastic cap (9) at base of valve and carefully turn large (19mm) hexagonal nut (7) clockwise, to reduce flow and anticlockwise to increase flow.

Effective adjustment range is achieved with half turn.

**NOTE:** Valve action from a closed position to a maximum open position is continuous i.e. Fast to first step and then immediately slow to maximum open position. The slow opening stroke is controlled by an hydraulic damper located in the extension at the base of the valve.

- 1 Terminal Head
- 2 Plunger
- 3 Solenoid Coil
- 4 Seal
- 5 Wire mesh screen

- 6 Valve Spring

Type 1 = Class 1 Fast Opening and Closing On/Off

Type 2 = Class 1 Fast Opening and Closing with Max. Adjustable Flow

Type 3 = Class 1 Step Slow Opening, Fast Closing with Adjustable Low Start Rate

Type 4 = Class 1 Step Slow Opening, Fast Closing with Adjustable Low Start Rate and Adjustable Flow.

**IMPORTANT:** All above solenoid valves can be supplied with closed position indication (C.P.I.) switch.

**NOTE:** m<sup>3</sup>/h x 35.315 = ft<sup>3</sup>/hr.

**NOTE 2:** For code numbers for 24V DC/24V 50HZ/12V DC and 110V, See Separate Coding Leaflet.

## GS 2000 RANGE CLASS 1 SOLENOID OPERATED VALVES.

**GS 2000 CLASS 1 SOLENOID VALVES: FLOW DIAGRAM**

### Valves fitted with Flow Adjuster Fast or Slow Type.

Adjustment is by means of small (8mm) hexagonal nut (8) located at base of valve.

Turn clockwise to reduce flow.

Maximum adjustment approx. 5 turns for 1/2 & 3/4 sizes, approx. 8 turns for 1, 1 1/2 & 2" sizes.

#### Note:

First adjust step setting if applicable, then max. flow setting.

Thereafter check step adjustment.

Do not force adjustment beyond stop.

**Installation 1.** Valves must be installed in conformance with flow direction arrows cast into valve ports for proper operation

2. Ambient temperature must not exceed limits specified.
  3. Pipes should be cleared of all impurities prior to valve connection.
  4. Any sealants should be applied to male thread of pipe and NOT to female thread of valve.
  5. DO NOT USE VALVE ACTUATOR AS A LEVER WHEN TURNING VALVE ON TO PIPE. USE CORRECT TOOLS OVER FLATS OF VALVE PORT FACES.
  6. Install vertically wherever possible.
- Users are reminded of their responsibility to ensure that all Johnson Controls Products are used in a manner which is safe and without risks to health and to comply with local laws and regulations.
- WARNING:** Unauthorised disassembly, reassembly, or internal adjustment may result in a hazardous condition, and will revoke any guarantees.

JOHNSON CONTROLS PRODUCTS GROUP

## SERVICE EXCHANGE ACTUATORS ITT/Johnson, SH Electrohydraulic, & GH 5000 Gas Safety Shutoff Valves

### SERVICE EXCHANGE ACTUATORS For Electrohydraulic Gas Safety Shut-off Valves

**AS OF AUGUST 1996 JOHNSON CONTROLS  
 ARE NO LONGER OFFERING A SERVICE  
 EXCHANGE PROGRAM FOR SH SERIES  
 ACTUATORS**

#### ELECTROHYDRAULIC VALVES

As in the manufacture of any long-term product there is a history of improvement and modification known and recorded within the company. There are major internal differences between the ITT and SH valves and the GH series. Such information is not known to outside companies.

The Johnson Controls class 1 electrohydraulic valves were developed from the ITT range of 'Hydramotors' (registered trade mark). From 1975 changes were made and the range was re-designated the 'SH electrohydraulic valve series', using an alpha numeric numbering system to classify sizes, types, connections and voltages. In order to distinguish the new models from earlier production an international coding system, the GH 5000 series, was introduced for customers of the Johnson Controls worldwide organisation.

Electrohydraulic valves are used in gas burner trains and controls and are essential for the safe operation of the burner in numerous applications including public buildings and facilities, schools and shopping complexes. In these situations safety is of the utmost importance.

#### Non-Repairable Actuators

The very early type HO (ITT) Hydramotors are obsolete and MUST be replaced if they fail.

## Type AH Actuator for Series GH & SH Electro hydraulic Gas Safely Shut-Off Valves

**AH-5000 or  
SH Actuator**

**Warning:**

It is imperative that the extension piece attached to the actuator stem remains with the valve on replacement of the actuator and is used again with the replacement actuator.

### Adjustment of switches in terminal box

Switch M for manual adjustment of stroke.

Stroke limit switch. Factory set & sealed for max stroke. This setting must not be moved.

Switch S for Closed Position Indicator. This is factory set & sealed and must not be moved.

Switch R for Low Fire Adjustment.

~Note Switch S for Closed Position Indicator. Switch must not indicate 'closed' if the valve plug is more than 1 mm from shut-off condition.

The adjustment of the switches to different switching positions is carried out on the slotted screws. Clockwise turning of the screws (screwing in) effects stroke reduction, counterclockwise turning effects stroke increase. On switch M a smaller or larger flow rate is effected.

Check switch position and flow rate after adjustment by several switching cycles.

## Replacement of Actuator

1. Close main gas cock, disconnect power supply and disconnect cabling.
2. Remove the 4 screws (1) in locking rings (2) and lift off actuator.
3. Clean sealing surfaces of valve and new actuator. Gasket ring (3): On valves with a flat gasket ring—the old ring is removed and a new one used.

On valves which are sealed with a rubber ring with square □ or circular ○ cross-section, the gasket is cleaned and re-used.

### ELECTRICAL CONNECTIONS: TYPE AH ACTUATOR FOR GH & SH SERIES VALVES CAUTION! SH SERIES HAS DIFFERENT TERMINALS (NUMBERS IN BRACKETS)

Operation	Terminal	Terminal Connection		Connection Diagram
On-Off AH-5X00-01X0	6	none (vacant terminal)		
	3	none (vacant terminal)

	8	Closing contact		
	6	common connection		
	9	common connection		

### 1 CLOSED POSITION INDICATION

The On/Off and High/Low/Off versions of the GH/SH/AH range of electro-hydraulic valves can be fitted with Closed Position indication (C.P.I.) C.P.I. switches are set and sealed after complying with the strict requirements set out in Appendix 2 of MRST 2.3/2.4

Safety shut-off valves can be a more economical method of meeting the requirements agreed by British Gas, SBI and BCMA and as set out in BS 5885: 1980 which state that "for burners above 1000 KW and up to 2000 KW two Class One Valves with systems check are required"

Acceptable systems check, in accordance with this document can be either:

(a) Safety Shut-Off Valve with proof of closure switch:

OR (b) Safety Shut-Off Valve fitted with C.P.I. OR (c) Pressure proving system.

Of these alternatives, the most economical method is generally (b), Safety Shut-Off Valves fitted with C.P.I. which can thus give economies at the burner manufacturing stage.

### List of Johnson Controls Electrohydraulic Actuators

The Actuators listed below are all products of Johnson Controls (formerly ITT controls).

List of HO (ITT) Hydramotor, SH & GH 5000 Actuators:

Actuators 240 volt	Actuators 220 volt	Actuators 110 volt
HO (ITT)	HO (ITT)	HO (ITT)
SH 111	SH 110	SH 112

### New GH Electrohydraulic Valves

Features:

• CPI switching now available over entire range.

IP54 rating over entire range (protected against dust ingress and water sprayed from all directions).

Improved flow.

Wire mesh integral filters.

Safety shut-off.

Class 1, certified to BS5963

Robust construction.

Interchangeable actuators  
240, 220 & 110V 50/60Hz models  
available.

Type GH Valve up to 2" Threaded.  
Aluminium Die Cast Body.

Type GH Valves 2 1/2" sizes and larger

When fitting a service exchange actuator to a valve body users should refer to the service/installation leaflet.

Users are reminded of their responsibility to ensure that all Johnson Controls Products are used in a manner which is safe and in compliance with local laws and regulations and without risks to health and property.

Leaflet subject to change without prior notice
