4.6 Parts for maintenance purposes	16

1. General information

All persons involved with the assembly, operation and/or maintenance of safety shut-off valves must read and understand all of the following documents:

- **Technical product information** contained in valves and controls information sheets, e.g. 711.00.
- **General operating manual for gas pressure regulators and safety devices** – this RMG document contains information on assembly and operation as well as general information on troubleshooting.
- **Operating and maintenance instructions / spare parts 672.20** – this document contains more detailed information on assembly and operation of safety shut-off valves.
- **Actuator RMG 672** is an integral component of the safety shut-off valve and is described in this document, "Operating and maintenance instructions, spare parts".

There are **national laws and regulations** for all sorts of jobs on gas pressure governors, from planning to maintenance. Be sure to comply. (In Germany, for instance, DVGW work sheets G 600, G 459/II, G 491 and G 495.)

Inspection and maintenance intervals depend mostly on operating conditions and the nature and properties of the gas. There are no general rules or recommendations for intervals. For Germany, we recommend to consider maintenance intervals as stated in DVGW work sheet G 495 in a first instance. However, in the mid-term, intervals must be adapted to the requirements of each specific equipment.

During maintenance, components must be cleaned and then checked thoroughly. This is necessary even if there have not been any unusual observations during operation and/or functional testing. Checks must focus, in particular, on diaphragms and seals and all movable parts and their respective bearings. Any and all defective parts must be replaced with new ones. The same applies to O rings removed during disassembly.

Item numbers mentioned in the specific operating and maintenance instructions correspond with the numbers in the spare parts lists and drawings.

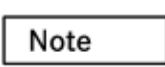

Some parts in the lists and drawings are marked with a letter "W". We recommend to always have a reserve of those parts in stock for maintenance purposes. Those spare parts are put together in another separate list at the end of the spare parts list.

The following actuators are used with the following equipments. For all, there are corresponding operating and maintenance instructions:

RMG 402	402.20
RMG 408	408.20
RMG 503 DN 25/50 - DN 150/300	503.20
RMG 530	530.20
RMG 711	711.20 and 711.21
RMG 721	721.20

1.1 Safety information

In this manual, safety information is highlighted by means of the following titles and eye catchers:

Eye catcher	used for:
 Danger	danger to life and limb
 Caution	danger of damage to property and/ or the environment
 Note	important additional information

2. Specific operating instructions

2.1 Opening the safety shut-off valve

The shut-off valve works on the principle of underpressure shut-off. It can be engaged only if the pressure at the measuring point corresponds to the operating pressure p_a .

Actuators K10a, K11a/1 and K11a/2 must engage first.

2.2 Engaging actuators K10a, K11a/1 and K11a/2

Unscrew sealing cap (1), turn round and put on rod (22, 50). Pull rod all the way to limit stop and let slip back slowly.

The actuator is engaged. The shut-off valve may be opened now.

3. Specific maintenance instructions

3.1 Actuators K10a, K11a/1 and K11a/2

Before dismounting the actuator from the shut-off valve switch device, you must release the actuator.

Devices with underpressure release are released automatically.

NOTE

If you want to dismount the switch mechanism, you must first initiate the underpressure release and then pull back the rod (22) at least to its engaging position.

When mounting the switch mechanism, pull back rod (22) and push the lock bushing (12) over the spheres (28). (Position as in case of underpressure shut-off.)

- Rod (22) must move easily. If you should find any damages to the switching face (dents, burs etc.), replace the rod.
- The contact faces between the spring support (8) and lock bushing (12) must be free of grease and oil at all times.
- The spheres (28) and their support holes may be greased, but only a very thin layer of grease.

3.2 Actuation tests

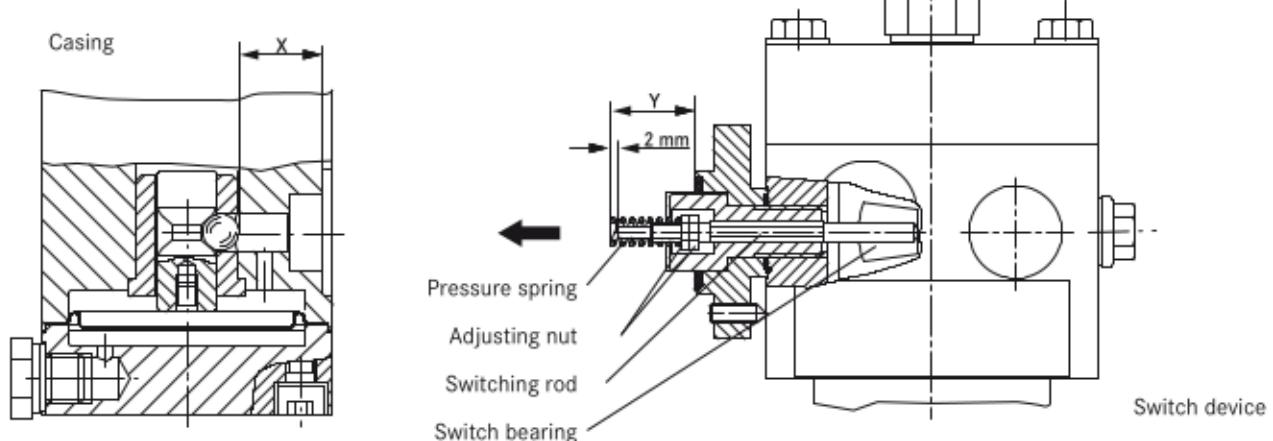

Actuation tests with actuators K10a, K11a/1 and K11a/2 for RMG 503, RMG 530 and RMG 711 may be carried out only with actuators mounted on shut-off valve switch devices. Otherwise, there is a danger of mechanical damage.

Caution

Before starting, remove sealing cap (1) from rod (22).

3.3 Instructions for testing and adjusting actuators / switch devices

3.3.1 Actuators K10a, K12 and K13 for RMG 402, RMG 408 and RMG 721

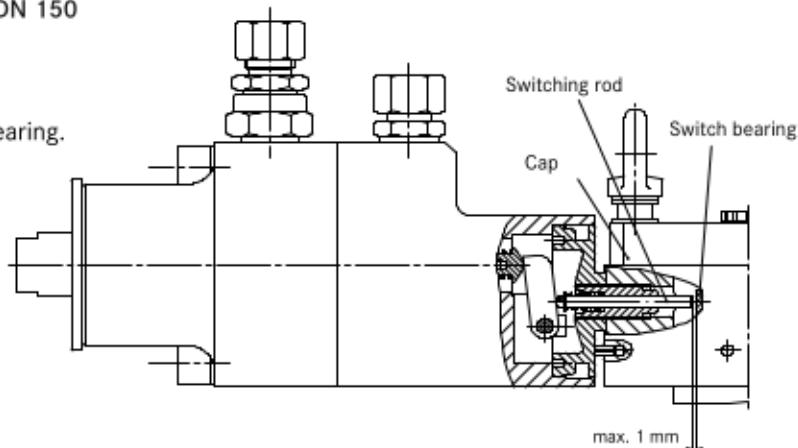

Shut-off valve must be engaged. Switching rod must rest on switch bearing. The value of adjustment Y between joining piece and pressure spring must be equal to gap X (with respect to casing). In the event of deviations, turn adjusting nut to adjust. The switch rod must be about 2 mm shorter.

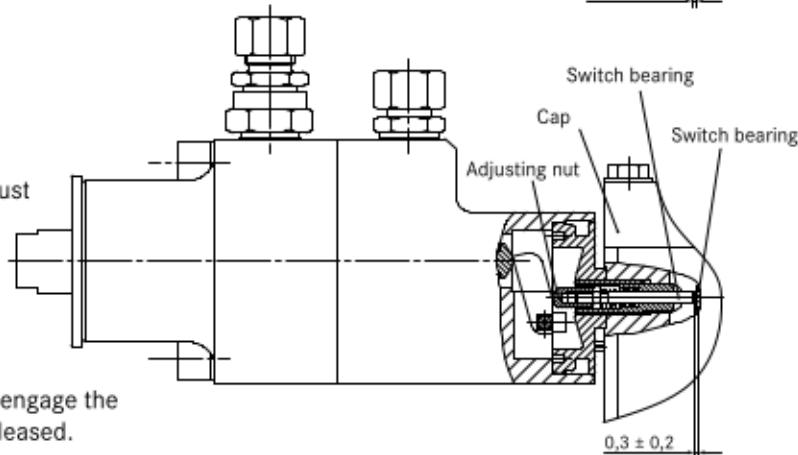

3.3.2 Actuators K10a, K11a/1 and K11a/2 for RMG 503, RMG 530 and RMG 711 DN 25 thru DN 150

- The shut-off valve must be engaged.
- The cap must have been dismounted.
- The switch rod **must not** rest on the switch bearing.
- The gap must not be greater than 1 mm max.

3.3.3 Actuators K10a, K11a/1 and K11a/2 for RMG 711 DN 200 thru DN 300

- The shut-off valve must be engaged.
- The cap must have been dismounted.
- The gap between switching rod and switch bearing should be 0.3 ± 0.2 . If necessary, adjust by turning the adjusting nut.

Functional testing

It should not be possible to engage the actuator after it has been released.

3.4 Tightening torques M_A

Screws and bolts - Item no.	Tightening torques M_A in Nm		
	K10a, K11a/1, K11a/2	K12	K13

166	Joining piece	1		St	10001810
167	O ring	1	W	KG	20310
168	Guide screw	1		NSt	10001811
169	Switching rod	1		NSt	10001812
<i>Only for actuators K12 and K13 with underpressure release</i>					
170	On / off valve	1			89190100

4.6 Parts for maintenance purposes

Actuators K10a for RMG 402, RMG 408 and RMG 721

Item no.	Denomination	Part no.
2	O ring	20244
7	O ring	21069
29	O ring	20518
30	Diaphragm	10010610
34	O ring	20226
36	O ring	20243

Actuators K10a, K11a/1 and K11a/2 for RMG 503, RMG 530 and RMG 711

Item no.	Denomination	Part no.		
		K10a	K11a/1	K11a/2
2	O ring	20244	20244	20244
7	O ring	21069	21069	21143
29	O ring	20518	20518	20518
30	Diaphragm	10010610	10022515	
34	O ring	21143	21143	21143
62	O ring		21005	
71	O ring			20243
72	O ring			21144

Actuators K12 and K13 for RMG 402, RMG 408 and RMG 721

Item no.	Denomination	Part no.	
		K12	K13
113	O ring	20308	20308
119	Diaphragm	10001757	10001763
132	O ring		20307

Accessories for actuators K12 and K13

Assembly on RMG 402, RMG 408 and RMG 721

Item no.	Denomination	Part no.
164	O ring	20235
167	O ring	20310
