

J48K & KC

Pressure Relief &
Creep Relief Valves
Nominal Diameter 1" & 2"

Applications

- Industrial
- Commercial

Brief information

Operation: As part of the comprehensive range of safety equipment, Elster Jeavons produces two special versions of the proven J48 range. These are the J48K pressure relief valve and the J48KC creep relief valve. Both versions incorporate new quick release spring adjustment mechanisms which provide easy access for spring adjustment and routine maintenance.

Application J48K: The J48K pressure relief valve guards against excess pressure. The valve is fully automatic in operation and resets when the pressure falls below the pre-set value.

Application J48KC: The J48KC creep relief valve is normally fitted on a skid or modular units. It prevents the build up of pressure on the downstream side during periods of zero demand in the event of main stream valves not locking up. The units are sized so that their maximum capacity is less than 1% of the full fault capacity of the skid or modular unit (British Gas Specification BGC/PS/E26).

Both versions, which are designed for natural, liquid petroleum and manufactured gases, can be installed in horizontal and vertical pipelines.

Control: A comprehensive range of springs is available. The relief pressure can be easily and accurately adjusted by turning the spring adjustment unit located under the top cap. The design of this mechanism provides virtually frictionless adjustment and eliminates "spring wind up".

The complete spring adjustment mechanism can be removed easily for maintenance and spring changes. If required the units can be supplied factory set with a security seal at extra cost.

Technical Data: Maximum Relief Pressure: 150mb (60"wg)

Servicing: The J48K and KC have been designed for ease of access, inspection and servicing of all internal components. A standard soft spares kit is available for all sizes.

1" reference number SK4806-01
2" reference number SK4809-01.

Main features

- Sizes: J48K - 1" and 2"
- Sizes: J48KC - 1"
- Temperature range -20°C to +70°C
- Threaded connections to BS EN 10226 (ISO 7) or NPT (other threads may be available upon request)
- Spring loaded
- Quick release spring adjustment
- Can be mounted in any orientation (may need to be re-set after installation).

J48K: Pressure Relief Valve Relief Capacities

The relief valve will begin to open and relieve when the inlet pressure rises to the setting pressure. In the tables above the inlet pressure is increased above the listed setting pressure and the resultant relief flow is recorded.

The capacities on the previous pages are given in SCMH of natural gas (0.64 SG). For other gases multiply the capacity by:

$$\sqrt{\frac{0.64}{\text{gas sg}}}$$

GAS	SG
Air	1.00
Towns Gas	0.50
Propane	1.53
Propane / Air	1.20

2"	234	200	52	167	219	3.1

Material Specifications

A summary of the material specification for the J48K is given for reference. All material has been selected to provide maximum durability and reliability in service.

Components	Specification
Body, cover, spring adjusting bush, spring adjusting screw and bottom plug, valve spacer, valve disc clamping washer, valve spindle guide.	Aluminium Alloy
Top cap, locking lever, spring holder, diaphragm spacer.	Acetal Resin (Top cap and locking lever UV stabilised)
Diaphragm plate.	Mild steel
Main diaphragm, secondary diaphragm, valve disc and "O" rings.	Nitrile (Buna)
Springs	Carbon Steel
Impulse tube	Brass

Quality:

Elster Jeavons is committed to a programme of continuous quality enhancement. All equipment designed and manufactured by the Elster-Instromet group benefits from the group's quality assurance standards which are approved to EN ISO9001:2008.

Loading Springs

All springs are colour coded for ease of identification.

Spring Range		1"	2"
mbar	"wg
